

FROM DIGITIZATION TO DIGITAL RESILIENCE

3 Priorities for Manufacturing's Next Chapter

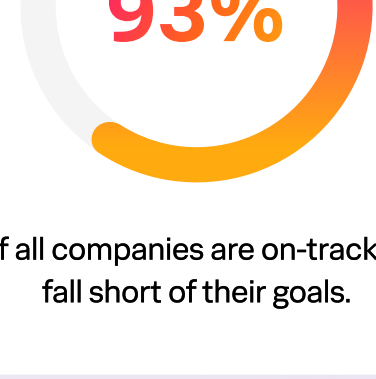

Manufacturers have led the way with digital transformation — from the enterprise to the factory floor. But as exciting as industry 4.0 is, it's not utopia.

Rising security threats

Nearly half of manufacturers suffer data breaches

Decarbonization expectations

61% of industrial organizations have decarbonization targets.

Expensive downtime

87 hours

is the average time for manufacturers to recover from each cybersecurity related incident caused by human error.

\$255 billion

is the cost of downtime for manufacturing organizations.

93% of all companies are on-track to fall short of their goals.

Manufacturers' new top priority: digital resilience.

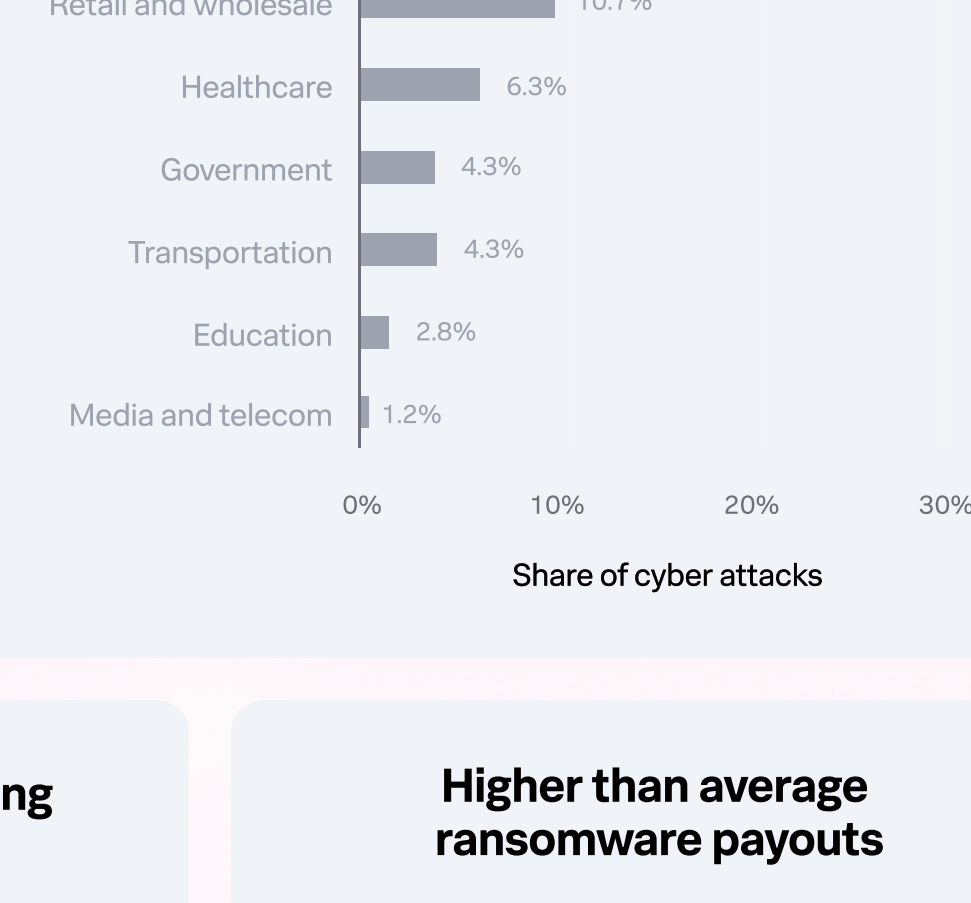

Here are three things they want to accomplish:

1

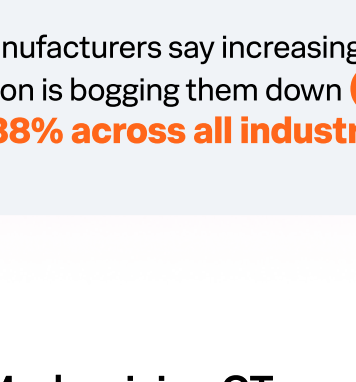

Prevent major issues by modernizing OT security

Cybersecurity challenges are more intense in manufacturing than nearly any other industry.

#1 most targeted industry

Higher likelihood of shutting down critical systems

50% of manufacturers say increasing threat sophistication is bogging them down (compared to 38% across all industries).

Higher than average ransomware payouts

\$11 million

average across all industries (in USD)

\$25.7 million

average in manufacturing

Modernizing OT security for manufacturing is key.

Securing IoT and OT is critical, but managing complexity due to too many disconnected tools is a top challenge for manufacturers — as reported by **nearly 1 in 4 manufacturers**.

Splunk bridges traditional silos so manufacturers can detect, investigate and respond faster to cybersecurity threats across IT and OT.

Splunk reveals where our security has potential to improve and, when there are issues, helps us figure out what went wrong so we can prevent it from happening again. It's been an absolute game changer for us.

James Steel,
Detection and Response Team Manager, Meggitt

Outcomes for Meggitt

40 sites

secured globally with the help of AI

100%

increase in security coverage for staff workstations

1 day

to create dashboards to enable secure remote working

2

Remediate threats and disruptions faster by achieving traceability

Manufacturers want to see every aspect of a product's life cycle so they can find ways to improve operations.

But gaps in data visibility have long prevented the industry from achieving full traceability.

16% of manufacturers have real-time monitoring across the entire production process.

Today's technology is closing the gaps to make traceability possible:

- Linking systems and customizing data
- Projects building on each other
- Leveraging insights from existing tools

Splunk Cloud Platform translates all that raw data into transparent, actionable insights that teams across Heineken use to resolve operational issues and improve performance.

Guus Groeneweg,
Global Product Owner for Digital Integrations, Heineken

Outcomes for Heineken

13 billion gallons of beer

distributed every year

5,000+ applications

connected

25 million monthly messages

captured and analyzed

3

Adapt quickly to take advantage of new opportunities, like net zero

Regulatory bodies are pushing progress on the road to net zero.

In one shape or another, these disclosure requirements are coming.

Sara Mahaffy,
ESG strategist at RBC Capital Markets LLC

January 2023

The EU adopted the Corporate Sustainability Reporting Directive (CSRD) applying to 50,000 companies.

June 2023

The International Sustainability Standards Board (ISSB) issued its first disclosure standards.

October 2023

U.S. states, like California, are passing legislation to require climate disclosures.

Climate disclosures might feel intrusive — but they are also a big opportunity for manufacturers.

2X energy cost

Reducing carbon footprint also slashes energy costs.

The 2024 global energy price index is expected to be more than 2x what it was in 2020.

Sustainable measures attract more conscientious consumers.

2/3 of consumers are willing to pay more for sustainable products.

Manufacturers can start with IT sustainability. Moving on-prem data centers to the cloud can drive significant CO2 savings — up to 80%.

Manufacturers can drive progress toward net zero.

Build digital resilience with edge-to-enterprise visibility

With Splunk, manufacturers gain comprehensive visibility across digital systems so they can respond faster to security threats, keep systems up and running, integrate IT and OT systems, and take advantage of new opportunities.
